Evidence: <li>Use Apply to site only after the preview looks correct and the target is authenticated.</li>                                                                                                                             |
| Installer at line 625             | Windows setup, update, shortcut, or installation behavior. Evidence: <p>Use Check updates to manually look for a newer builder. Updates come from GitHub Releases after changes are merged into the release branch and a new installer is built. Use the Preferences menu to switch between light                   |
| Installer at line 629             | Windows setup, update, shortcut, or installation behavior. Evidence: <li>The app downloads the installer, closes the current builder, updates the existing install, and reopens the app.</li>                                                                                                                       |
| Installer at line 631             | Windows setup, update, shortcut, or installation behavior. Evidence: <li>If an old uninstaller fails, setup stops the builder process and continues updating the same folder.</li>                                                                                                                                  |
| Installer at line 636             | Windows setup, update, shortcut, or installation behavior. Evidence: <li>If a release is paused, wait for the next version instead of forcing the old installer.</li>                                                                                                                                               |
| Installer at line 637             | Windows setup, update, shortcut, or installation behavior. Evidence: <li>If Windows blocks a process from closing, use Task Manager as Administrator to end the stuck installer or old builder process.</li>                                                                                                        |
| Installer at line 638             | Windows setup, update, shortcut, or installation behavior. Evidence: <li>If the app opens but looks stale, close it fully and reopen it from the desktop shortcut.</li>                                                                                                                                             |
| Installer at line 640             | Windows setup, update, shortcut, or installation behavior. Evidence: <p>If the app cannot update, close any old OMB Builder process in Task Manager and reopen the app from the desktop shortcut. Avoid installing another copy in a different folder; duplicate copies can make Windows shortcut                   |
| Browser DOM at line 646           | Builder or website interface behavior in the browser/Electron renderer. Evidence: <p>Anything pushed to the portfolio repository can become public. Treat the portfolio as a public engineering document. If a file would be unsafe in a public GitHub repository, it should not be uploaded or published thro      |

| Item                         | Explanation                                                                                                                                                                                                                                                                                                             |
|------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Security or auth at line 647 | Publishing protection, API key safety, HTTP security, or user authorization. Evidence: <p>Good portfolio evidence is public-safe, clearly labeled, and useful to a visitor. Private credentials, private lab data, personal identity documents, and unpublished confidential work should stay out of the portfolio.</p> |
| Security or auth at line 649 | Publishing protection, API key safety, HTTP security, or user authorization. Evidence: <li>Do not upload private keys, passwords, private tokens, or private lab data.</li>                                                                                                                                             |
| Security or auth at line 652 | Publishing protection, API key safety, HTTP security, or user authorization. Evidence: <li>Keep authentication local. The builder should not commit credentials.</li>                                                                                                                                                   |
| Security or auth at line 657 | Publishing protection, API key safety, HTTP security, or user authorization. Evidence: <li>Check code files for tokens, API keys, Wi-Fi credentials, private comments, or machine-specific paths.</li>                                                                                                                  |
| Cloudflare or AI at line 660 | Public AI assistant, Worker deployment, or model-provider fallback behavior. Evidence: <li>Use Security report to review app download counts, current publishing authorization status, and whether visitor logging requires Cloudflare analytics.</li>                                                                  |
| Security or auth at line 662 | Publishing protection, API key safety, HTTP security, or user authorization. Evidence: <p>If another user installs the builder, they should connect their own target unless you explicitly authorize access to your target. The builder should help people create portfolios, but it should not give anyone silent      |
| Git command at line 669      | Repository state, publishing, branch checks, or release automation. Evidence: <p>The routine is intentionally repetitive because publishing is safer when every project has been parsed and every section has been previewed before Git pushes anything.</p>                                                            |
| Security or auth at line 684 | Publishing protection, API key safety, HTTP security, or user authorization. Evidence: <li>For publishing target changes, authenticate before loading or applying site data.</li>                                                                                                                                       |
| Rich text at line 755        | Rich editor behavior, formatting, paste handling, or content sanitization. Evidence: <span>Accent color</span>                                                                                                                                                                                                          |
